

Natural, honest, pure -
100% ORGANIC - nothing else!

We use for our snacks & treats exclusively:

100% high quality organic muscle meat and BIO innards and BIO fish in food grade.

This is what makes our products so special:

- High quality, natural treats
- Manufactured in Germany using electricity from renewable energies
- Gentle freeze drying
- Without the use of genetic engineering

Advantages of freeze drying:

- Gentle drying process
- No additives necessary
- Color, smell, vitamins and nutrients remain

BIO for appropriate nutrition for your dog or cat:

Selected organic meat ensures an optimal and balanced nutrient ratio and supports you in nourishing your four-legged friend in a healthy and species-appropriate way.

Our snacks are produced with a gentle process:

Through the gentle freeze-drying, nutrients as well as the natural meat structure and flavors are largely preserved.

Regional raw materials are important to us:

We source our raw materials as regionally as possible, but never across EU borders.

Why ORGANIC?

The meat comes exclusively from certified organic farms. In the case of farm animals, the keeping conditions are tied to stricter requirements:

- The animals have a lot more freedom of movement.
- There are outside areas for chickens and cattle required by law!
- The animals are not kept on boards or concrete floors.
- Animals whose meat is processed into organic dog food will be raised without the use of antibiotics or growth-promoting hormones.
- The feed of the animals does not contain any genetic changed substances. This is forbidden!

We do not just love our own pets! Even the farm animals that give us the meat for our snacks are important to us.

We want the animals to be treated as good as possible. Spend a species-appropriate and beautiful life. Therefore, it was clear to us from the beginning:

100% ORGANIC - nothing else!

Why ORGANIC from Nature by Caniworld?

- **Gentle production using freeze-drying:**

All vital substances and minerals as well as the natural meat structure is largely retained, so that we do not need any further additives.

- **Organic out of conviction:**

For organic feeding of your lovely pet speak especially the better keeping conditions of the slaughtered farm animals. Chicken, cattle and Co. have more space on the organic farm conventional conspecifics and one guaranteed outdoor exercise. Preventive use of antibiotics and long transports to slaughterhouses are taboo.

- **Product variety for every requirement:**

Our organic snacks are currently available in the chicken, beef and fish variants: from chicken hearts about cattle udders, to high quality salmon filet.

- **For BARFers, allergy sufferers & skeptics among the four-legged friends:**

Our snacks consist of a single source of protein (monoprotein snacks) and are also suitable for nutrition-sensitive four-legged friends. Because we are using exclusively pure freeze-dried organic meat, our BARFers must not do without anything and even our skeptical velvet paws won't leave your side with the organic chicken hearts as snacks.

- **Many possible uses:**

Whether as a reward snack for training or as an educational aid or simply for between:

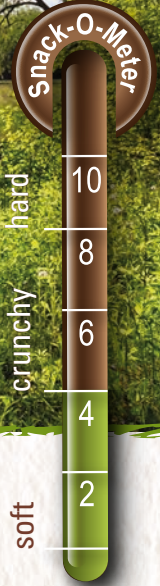

Our treats are suitable for dogs and cats of any ages and race!
